### Quest Analytics Introduces AutoTrend™ for Fiserv Signature Data Warehouse

Pittsburgh, PA – Friday, December 19, 2011 – Quest Analytics announced today its newest product to help financial institutions automate trending administration. The solution is built specifically for banks using the Fiserv Signature data warehouse.

The Fiserv Signature data warehouse is an excellent tool for building reports and performing financial analysis. However, many reports use trended data. Quest AutoTrend™ automates the manual processes associated with running daily, weekly and monthly data warehouse trending.

Quest AutoTrend™ saves administration time and ensures data is trended without manual intervention. Data warehouse administrators receive automatic notifications indicating the status of the latest trending processes. Additionally, Quest AutoTrend™ verifies the integrity of the newly created trend records by performing automatic comparisons and balance checks.

#### About Quest Analytics

Quest Analytics is an innovative consulting and technology company helping banks automate tasks and improve efficiency. Founded in 2001, Quest Analytics is a privately held company headquartered in Pittsburgh, Pennsylvania.
